1 Project Overview

Repository: <https://github.com/realzhengyuting-cloud/MessageDirectory>

This project is a React Native message directory application built with Expo and TypeScript. The app displays 6 message categories (You, Home, Love, Family, Friends, School). Tapping any category shows the stored messages for that directory. Users can also send new messages within each category.

2 Tech Stack

- React Native (Expo SDK 54)
- TypeScript
- React Navigation (Native Stack)
- Expo Vector Icons

3 Project Structure

File / Directory	Description
App.tsx	App entry with navigation stack
index.ts	Expo entry point
src/data/messages.ts	Category and message data
src/screens/HomeScreen.tsx	Home screen with category grid
src/screens/MessagesScreen.tsx	Messages list with send functionality
package.json	Dependencies
tsconfig.json	TypeScript configuration

Table 1: Project file structure

4 Prerequisites

- Node.js (v18+)
- npm
- Expo CLI
- Android Studio (for Android Emulator) or Xcode (for iOS Simulator)

5 Installation and Setup

5.1 Install Dependencies

```
npm install
```

5.2 Run on Android Emulator

```
npx expo start --android
```

5.3 Run on iOS Simulator

```
npx expo start --ios
```

5.4 Run on Physical Device

1. Install **Expo Go** from Google Play (Android) or App Store (iOS)
2. Run `npx expo start`
3. Scan the QR code with your phone (same Wi-Fi network required)

6 Features

1. **Home Screen** — Displays 6 message categories in a grid layout with colorful icons
2. **Messages Screen** — Shows stored messages as cards with sender name, content, and timestamp
3. **Send Messages** — Users can type and send new messages within each category
